

Quick start Maintenance Holes:

Each discipline will create the 3d object on a National Cad Standards layer.

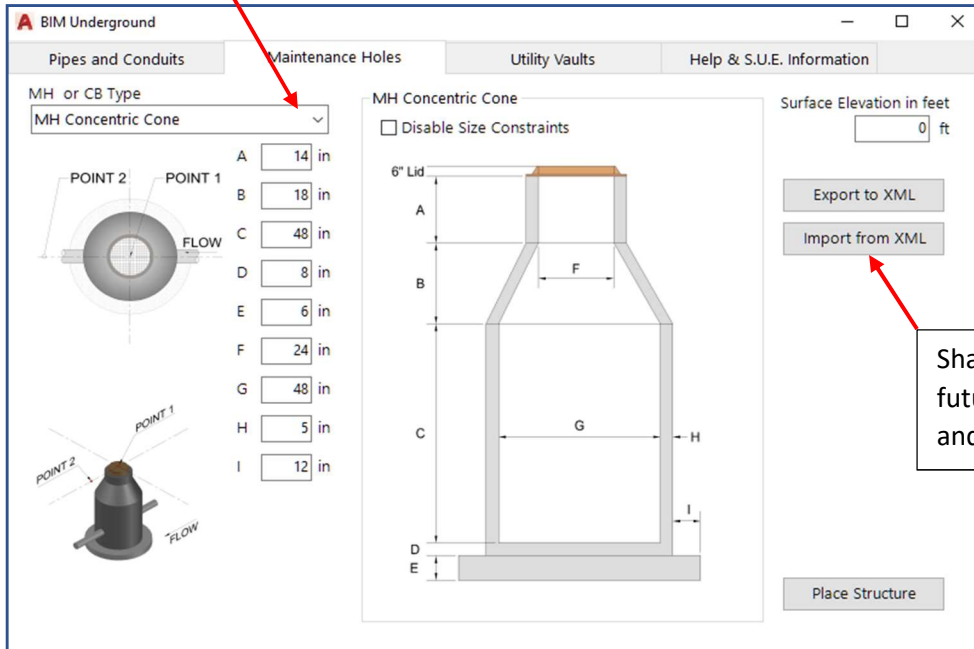

<https://www.nationalcadstandard.org/ncs6/>

Checking "Use S.U.E..." will add a suffix "-QL-A through -QL-D" and assign an accompanying layer color to help quickly identify areas checked for accuracy.

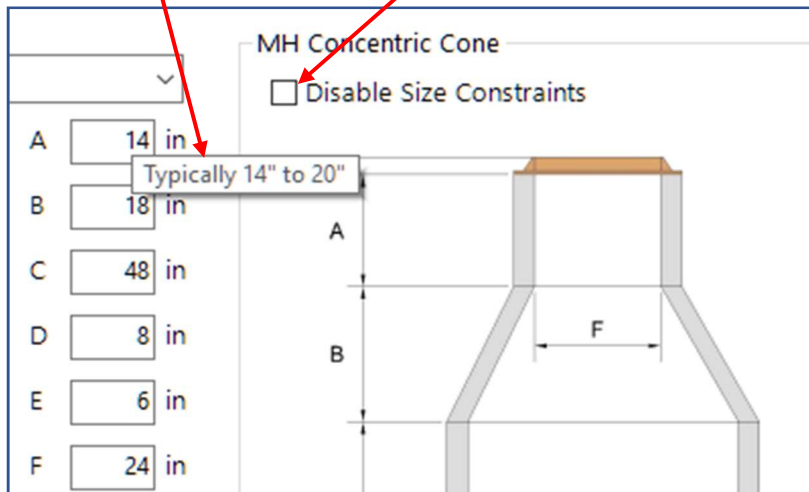

Creating a Maintenance Hole:

Choose a maintenance hole or catch basin that matches or is a close enough representation of your structure.

Share structures or save for future use with the Export and Import functions.

Tool tips give common values for the structure type.

Disabling Size Constraints allows for extended flexibility when creating a structure.
